Description

Micromax® Premium B+Cu+Fe+Mn+Mo+Zn+S+Mg is a fine granular fertilizer with trace elements, essential for optimal plant growth. It ensures your plants get all the trace elements they need, whether in growing media or in field applications. Packed with a balance of eight nutrients, the unique formula delivers a long-lasting supply of trace elements to your crops. This dust-free product is very safe in use, preventing toxicity symptoms. It is also environmentally friendly, with very low leaching of nutrients. It's easy to apply and distribute evenly, plus it's especially great for container crops.

Benefits

- Balance of trace elements to stimulate rooting and healthy growth
- Encourages strong and healthy crops
- Environmentally friendly with very low leaching

How to use

Micromax® Premium can be premixed in substrates for container nursery stock and pot plants. For field applications, distribute the product in the rooting zone. Can be used in combination with base rates of Osmocote® Exact and Osmocote® Pro. Gives excellent results on iron-demanding crops such as Buxus, Calluna, Cytisus, Hebe, Hydrangea, Pieris, and Vinca. Store under dry conditions. Partly used or damaged bags should be closed well.

Application rates

	Peat-based substrates	Bark-based substrates
Seedlings/Cuttings	0.1-0.3 g/l	0.2-0.4 g/l
Bedding/Pot plants	0.2-0.5 g/l	0.4-0.75 g/l
Container Nursery Stock	0.2-0.5 g/l	0.4-1 g/l

Field applications: 10-30 g/m² depending on soil type and rooting depth of the crop. Attention These recommended rates are based on non-fertilized substrates and must be adjusted when combining with other sources of trace elements such as Osmocote®, Osmoform® or other base fertilizers. The rate can be increased by 50% for iron-demanding crops. This product has been specifically designed for mixing in substrates or soils. Trial first on a small scale before changing the rate, application or your cultural practices. As circumstances can differ and the application of our products is beyond our control, ICL is not responsible for any negative results.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
