

# Procide<sup>4</sup>

## Procide 80SC

Procide is a progressive, broad spectrum contact and residual suspension insecticide (and miticide) that is safe for use on all ornamental plants.

## Description

Procide is perfect to use as a preventative application during peak times of insect activity. One application every 10 – 14 days will ensure protection against target pests. It uses advanced pyrethroid chemistry that is stable to sunlight and delivers longer residual activity. This also lowers spray frequency, overall costs and the amount of pesticide entering the environment. Procide's pyrethroid chemistry has more insecticidal activity than other conventional insecticides. It acts faster to control target insects, even at low application rates. Procide is best used as a preventative rather than a curative.

## Benefits

- \\ Ideal preventative insecticide
- \\ Fewer spray applications required
- \\ Less pesticide into the environment
- \\ Low risk of plant phytotoxicity
- \\ Contains surfactant to aid in wetting of foliage
- \\ Monitors pests and use as a knockdown as needed

## How to use

Apply every 10 – 14 days will ensure protection against target pests.

## Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
