

Hydraflo L

Hydraflo L is a liquid soil wetting agent that is safe to use on delicate ornamental flowering plants.

Description

Hydraflo L effectively decreases water surface tension. This aids the rewetting of soils in dry summer periods, eliminates localised dry spots and increases the uniformity of wetting throughout the soil profile. By allowing better water penetration and absorption, Hydraflo L helps plants to grow deeper, stronger roots. It also encourages free-drainage from waterlogged soils in winter and during heavy rainfall. This inhibits surface moss, algae growth and soil borne pathogens. When waterlogged soils drain, air is allowed into the root zone which enables the turf to take-up valuable nutrients.

Benefits

- \\ Long term performance enables rewetting of dry soils
- \\ Better drainage promotes deeper, stronger roots
- \\ Safe to use on any turf and ornamentals
- \\ Uniform wetting to avoid summer dry patch
- \\ Readily available in 20L and 200L containers

How to use

Prepare sufficient solution of Hydraflo L with water (at the specified dilution rate) to treat the intended volume of growing media. Use this solution to thoroughly soak the soil media. No extra irrigation is required beyond initial drenching, other than normal irrigation practices. For more details, please see a full description in the pdf or contact your local ICL advisor.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
