N	Total Nitrogen	0%
P	Phosphorus	21.4%
	Water soluble (P)	21.4%
K	Potassium	26.6%
	Water soluble (K)	26.6%

Description

Nutrivant PeakVant is rich in Phosphorus and Potassium which are the macronutrients essential for plant growth at the flowering and fruits stage so as to extract a higher fruit yield from a plantation. The mix has a lower Nitrogen to Potassium ratio that ensures there's no drying out and falling of the flowers. Above all, this mix contains Calcium for the crops that show signs of Calcium deficiency. All of this helps ensure there's a higher output of fruits and also a better formation in terms of shape and texture. This improved quality of fruits reflects in greater profit margins in the market.

Benefits

- \\ Increase fruit bearing, size, shining, and quality
- \\ Reduce calcium deficiency
- \\ Increase nutrient uptake and disease resistance

How to use

To be used for foliar spray methods

- 1 Add water to the fertilizer
- 2 Spray on crop leaves

Application rates

Minimum	1kg/acre
Maximum	2kg/acre

Dose your irrigation water with this solution, adjusting according to your crops' conductivity or ratio requirements. Trial first on a small scale before changing the rate, or any other variables, as circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for adverse results

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
