

Hydraflo L

Hydraflo L is a liquid soil wetting agent that is safe to use on delicate ornamental flowering plants.

Description

Hydraflo L is a liquid soil wetting agent that is safe for use on delicate ornamental flowering plants as it is on turfgrass greens, sportfields and lawns. Apply in advance of expected dry patch formation. Hydraflo L is a polymeric wetting agent that rewets readily after treated soil has been dry for extended periods. Made in Australia for varied condition, both Hydraflo L and 2 assist in overcoming extremes in weather and hydrophobic soil conditions. Available in 20L and 200L.

Benefits

- \\ Long term performance enables rewetting of dry soils
- \\ Better drainage promotes deeper, stronger roots
- \\ Safe to use on any turf and ornamentals
- \\ Uniform wetting to avoid summer dry patch

How to use

Prepare sufficient solution of Hydraflo L with water (at the specified dilution rate) to treat the intended volume of growing media. Use this solution to thoroughly soak the soil media. No extra irrigation is required beyond initial drenching, other than normal irrigation practices. For more details, please see a full description in the pdf or contact

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
