

MaxGuard[®] 2G

MaxGuard 2G

Maxguard 2G is a fast-acting, contact insecticide against surface feeding insects in a granular form.

Description

Maxguard 2G uses an advanced pyrethroid chemistry which is uniquely stable to sunlight. This provides much longer control (depending on application rate) when compared to other conventional pyrethroids. Maxguard 2G is proven to be very effective even at low application rates.

Benefits

- \\ Very effective insect control even at low rates
- \\ Less active ingredient required to control pest problems
- \\ Cost effective alternative to preventative systemic insecticides
- \\ High safety margin / low toxicity

Application rates

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
