

H2Pro[®]

FlowSmart

High performance penetrant wetting agent

Description

H2Pro[®] FlowSmart reduces surface tension on all types of turf to provide excellent water infiltration and penetration. Combining new surfactant technology as a carefully blended combination of polymer and penetrants, FlowSmart is retained around the root, ensuring continued re-wetting and effective and efficient water penetration. It also helps water move into and down through the rootzone, flushing carbonates and salts away from rootzones. Research shows using FlowSmart helps retain a drier turf surface under wet conditions.

Benefits

- Helps surface water penetrate quickly
- Maintain dry playing surfaces in wet conditions year-round
- Maximizes the effectiveness of irrigation treatments
- Assists with the flushing of carbonates and salts from root zones
- Can be used as part of an integrated disease reduction plan

Characteristics

Pack size	10 litre and 120 litre
Fomulation type	Liquid
Technology	Surfactant
Longevity	4 weeks *depending on environmental factors
Type	Soil penetrant

Application rates

Application rate	10 L/ha
Water volume	250 - 600 L/ha
Frequency	Monthly

Trial first on a small scale before changing the rate, or any other variables. As circumstances can differ, the application of our products is beyond our control, ICL cannot be held responsible for any adverse

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
