

# H2Pro<sup>®</sup>

## DewSmart

Healthy, dew-free greens

### Description

H2Pro<sup>®</sup> DewSmart is a newly formulated dew dispersant for turf grass areas. It's designed to prevent or reduce dew on the grass leaf, warding away fungal diseases. As an added bonus, the surface will be drier for cutting, allowing for a cleaner cut. A dew-free green is sure to impress early-morning golfers. The formulation contains specially selected sticking and spreading surfactants, which bond to the leaf surface and prevent moisture droplets from forming. DewSmart is ideal for use on greens to help minimize the risk of disease outbreaks and improve turf health and quality. Use whenever needed from autumn to spring as part of an integrated disease management program.

### Benefits

- \\ Suitable for greens, tees and sports fields
- \\ Prevents dew and guards against fungal growth
- \\ Lasts for 3 to 4 weeks in ideal conditions
- \\ Reduces the need for regular early morning switching of dew from greens
- \\ Greens can be clear of dew for a cleaner cut and for the early morning golfer

### Characteristics

Formulation type	Liquid
Technology	Surfactant
Pack size	10 litre and 120 litre
Longevity	Up to 21 days if applied in optimum conditions
Type	Dew dispersant

### Application rates

Application of other foliar products is not recommended in the 3-4 week period after H2Pro DewSmart is applied.

---

Application rate: 10 L/ha

---

Water volume: 300-400 L/ha

---

Frequency: Every 14 days

Best performance is achieved when applied under optimum conditions. Apply to a dry surface. Cut or brush grass before foliar application. Use nozzles suitable for a foliar application.

## Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
