Characteristics

Description

Nova SOP 0-0-53+44SO is the potassium sulphate in the ICL Speciality Fertiliser range. The product is recommended for use in any fertigation system. The high levels of potassium and sulphur fulfils the plants needs and prevents possible deficiencies. Nova SOP is nitrogen free, which makes this product suitable for use when nitrogen should be reduced (e.g. at fruit ripening stage), maintaining the right N:K ratio for this stage. The low salt index makes Nova SOP reliable in various soil types.

Benefits

- Efficient source of sulphur and potassium
- Low in sodium
- Easy to dissolve

How to use

1. Nova SOP can replace any other source of potassium available in the market. It can be used in all crops, in all developmental stages, when extra potassium is needed.
2. The product can be used with crops grown in greenhouses or open fields. Avoid using the product in water containing high levels of calcium.
3. Use Nova SOP in periods when high amounts of calcium nitrate are applied and N unbalance should be avoided. Do not mix the products into the same tank.
4. If you need more information, please contact your technical support.

Application rates

Recommended dilution rate for stock solutions: 7-10 kg / 100 l water

Trial first on a small scale before changing the rate, or any other variables, As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention
