Characteristics

Description

Nova Calcium 15.5-0-0+26.5CaO is the calcium nitrate fertiliser from ICL Speciality Fertilisers. This is the more indispensable fertiliser in hydroponics, because it is applied continuously during the entire crop cycle. It helps to maintain an optimal calcium level in the plant and prevents or corrects any deficiencies. Nova Calcium dissolves quickly and easily in water. The product mainly contains nitrate nitrogen, which is immediately taken up by plants. Calcium is important to improve the quality and the shelf life of the final produce. Nova Calcium is recommended for all crops and any fertigation system.

Benefits

- Efficient nitrogen and calcium source
- Nutrients in a very quick-to-absorb form
- Easy to dissolve

How to use

- 1 Calcium is one of the nutrients with low mobility in the plant and therefore it should be continuously applied throughout the entire growth period.
- 2 We recommend applying Nova Calcium with all crops, especially ones prone to calcium deficiencies, like fruits or vegetables.
- 3 It can be used in any fertigation system, providing an optimal growth of vegetation and an adequate level of calcium in the plant tissues, to improve the final produce's transportability, shelf life and quality.
- 4 Store under dry conditions.
- 5 Properly seal partly used or damaged bags.
- 6 If you need more information, please contact your technical support.

Application rates

Recommended dilution rate for stock solutions: 10-20 kg / 100 L water

Trial first on a small scale before changing the rate, or any other variables, As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention
