	Water soluble (S)	12.8%

Characteristics

Description

Nova Mag-S 0-0-0+16MgO+32SO is a quick-to-dissolve magnesium sulphate fertiliser to complete your crops' nutritional requirements. The magnesium improves chlorophyll levels and sulphur boosts synthesis of amino acids. It's also vital for developing plant proteins and hormones. This high-quality formula is perfect for fertigation and as there's no ammoniacal nitrogen in the mix, it's great for hydroponics growth systems. It's one of our most magnesium-rich fertilisers, plus it's chloride-free. Give your crops the nutrition they need with Nova Mag-S.

Benefits

- Extremely efficient magnesium and sulphur source
- Fully soluble and high purity nutrients that quickly dissolve in water

How to use

- 1 Nova Mag-S can be applied by fertigation with practically all other soluble fertilizers, but when preparing concentrated stock solutions, we recommend you avoid dissolving it with fertilizers containing phosphates such as Nova MAP, Nova Peak, urea-phosphate, or phosphoric acid, nor with calcium fertilizers such as Nova Calcium.
- 2 We also recommend you don't combine it with potassium-based fertilizers, but instead dissolve it in a separate tank.
- 3 If you need more information, please contact your technical support.

Application rates

Recommended dilution rate for stock solutions: 10-15 kg / 100 L water

Trail first on a small scale before changing the rate, or any other variables, As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention
