

FertiFlow™

Tomato-I

Early-stage nourishment for Tomatoes

Description

Fertiflow Tomato-I 16-11-32 is an essential mix for safeguarding the early stages of Tomato plantations. Tomatoes are nutrient heavy, and their crops perform better when provided with a good flow of nutrients to grow through the season. Tomato-I helps provide extra nutrients that tomatoes need to grow quickly and ensure firm rooting for the plantations, a factor that helps later during the fruitation phase of the plant.

Benefits

- \\ Fertilizer developed specially for early establishment of seedlings in Tomato and other transplanted crops
- \\ Healthy establishment and growth of seedlings
- \\ Plenty of fruiting branches with proper branching growth

How to use

To be used primarily for Fertigation applications

- 1 Apply directly to acidic soils with low pH, and/or tropical and subtropical soils.
- 2 Recommended for fertigated crops.
- 3 Store under dry conditions. Properly seal partly used or damaged bags.

Application rates

Minimum Average	10kg/acre
Maximum Average	20kg/acre

It is advised to adjust the application rates beyond the suggested limit as per the crop’s status and nutrient requirement. It is recommended to undertake a trial on a small scale before changing the application rate or any other variables, as circumstances can differ. As the recommended application rate might be beyond our control, hence, ICL cannot be held responsible for any adverse results.

Attention

Contact your ICL advisor for more detailed advice. Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.
