

Agriform Strawberry Mix Southern CA Short Term 22-7-11

High-performing controlled-release NPK and E-Max urea fertilizer designed for Southern California Strawberry growers

22 | 7 | 11
N P2O5 K2O

Guaranteed analysis

N	Total Nitrogen	22%
	Nitrate nitrogen (N-NO ₃)	6.6%
	Ammoniacal nitrogen (N-NH ₄)	7.9%
	Urea nitrogen (N-Urea)	7.5%
P2O ₅	Phosphorus Pentoxide	7%
K ₂ O	Potassium Oxide	11%
S	Sulfur	4.0%

Characteristics

Description

Agriform® Strawberry Mix Southern CA Short Term 22-7-11 delivers 7 months of nutrients for greater crop yields and superior quality fruit. Designed as a 100% resin-coated NPK and E-Max urea, Southern California strawberry growers recognize this as the industry standard for consistency and reliability. Designed for use on fall/winter planted strawberries from San Diego to Santa Maria, CA. One-third of the nitrogen comes from 100% coated urea. The coated urea increases the total nitrogen and is best suited for southern growing areas with warmer soil temperatures.

Benefits

- Increases yields for a strong return on investment
- Provides consistent plant nutrition throughout the crop cycle due to controlled release coating technology
- Is safe in use; can be placed directly in the planting slot beneath the root zone at pre-plant
- Release profile and high-quality nutrients combine for maximized crop yield
- One-third of the nitrogen comes from 100% coated urea

Application rates

These rates are meant as a guideline and take into consideration the historical use rates for the various products. For assistance in developing a fertilizer program for your specific site(s), consult with your ICL- SF Specialty Ag Sales Agronomist.

Low rates should be used when:

- 75% or more of nutrient need met by water soluble fertilizers.
- Climate is cool requiring low irrigation application rates.
- Soil tests reveal high salts or residual nutrients from prior crops.
- Water quality is poor and might result in injurious salt levels.
- Labor availability to manually fertigate is not a limiting factor.
- Managers are adept at interpreting crop nutrient needs daily.

Medium rates should be used when:

- About half of nutrient needs met by Agriform® and about half met by water soluble fertilizer.

High rates should be used when:

- 75% or more of nutrient need met by Agriform®.
- Climate conditions demand high irrigation rates and leaching below the root zone is possible.
- Irrigation water source is good quality with low salt content.
- Crop is going to last as long as the fertilizer longevity claim, or possibly longer.

Product Formula	Low	Medium	High
Agriform® Strawberry Mix Southern CA 7-mo 22-7-11	600-800	800-1000	1000-1200
