

Agriform Strawberry Mix Universal Mix 18-8-13 (7-9M)

A controlled-release fertilizer proven to deliver bigger yields and better-quality fruit for fall and winter planted strawberries in Southern California

18 | 8 | 13
N | P₂O₅ | K₂O

Guaranteed analysis

N	Total Nitrogen	18%
	Nitrate nitrogen (N-NO ₃)	8.3%
	Ammoniacal nitrogen (N-NH ₄)	9.7%
P ₂ O ₅	Phosphorus Pentoxide	8%
K ₂ O	Potassium Oxide	13%
S	Sulfur	4.5%

Description

Agriform Strawberry Mix Universal Mix 18-8-13 (7-9M) is a controlled-release fertilizer that delivers larger yields and superior strawberries year after year. Its proven performance is well known to California strawberry growers and is widely recognized as the industry standard for consistency and reliability. The 100% resin-coated N-P-K substrate delivers a 7-9-month controlled release to maximize crop yield and quality. Used for fall and winter planted strawberries, Agriform Strawberry Mix Universal Mix 18-8-13 (7-9M) is designed to perform well in all California regions and climates, particularly from Santa Maria north to Watsonville.

Benefits

- Increases yields and quality with a strong return on investment
- Safe to use; can be placed directly in the planting slot beneath the root zone at pre-plant
- Provides consistent plant nutrition throughout the crop cycle
- Release profile and high-quality nutrients combine for maximized crop yield
- One-third of the nitrogen comes from 100% coated urea

Application rates

Agriform® Strawberry Mix is the industry standard for consistency and reliability.

The controlled-release coating technology means it can be safely placed in the planting slot beneath the root zone at pre-plant to provide consistent plant nutrition throughout the crop cycle.

Rates (lb./acre) by product formula

Product Formula	Low	Medium	High
Agriform® 18-8-13	500-700	700-850	850-1200

Low rates should be used when:

- 75% or more of nutrient need met by water soluble fertilizers
- Climate is cool requiring low irrigation application rates.
- Soil tests reveal high salts or residual nutrients from prior crops.
- Water quality is poor and might result in injurious salt levels
- Labor availability to manually fertigate is not a limiting factor
- Managers are adept at interpreting crop nutrient needs daily

Medium rates should be used when:

- About half of nutrient needs met by Agriform® and about half met by water soluble fertilizer

High rates should be used when:

- 75% or more of nutrient need met by Agriform®
- Climate conditions demand high irrigation rates and leaching below the root zone is possible
- Irrigation water source is good quality with low salt content
- Crop is going to last as long as the fertilizer longevity claim, or possibly longer

These rates are meant as a guideline and take into consideration the historical use rates for the various products. For assistance in developing a fertilizer program for your specific site(s), consult with your ICL Growing Solutions Sales Agronomist.

Attention

Contact your ICL advisor for more detailed advice. Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.
