

Nova MAP 12-61-0

A nitrogen and phosphorus boost to kickstart crops

12 | 61 | 0
N P2O5 K2O

Guaranteed analysis

N	Total Nitrogen	12%
	Ammoniacal nitrogen (N-NH4)	12.0%
P2O5	Phosphorus Pentoxide	61%
	Water soluble (P2O5)	61.0%
K2O	Potassium Oxide	0%

Characteristics

Description

Nova MAP 12-61-0 is the ideal bag to grab at the start of the season, just before or after seeding, planting, or transplanting. A premium water-soluble straight fertigation fertilizer, it is a highly efficient source of phosphorus designed to boost plant uptake. Nova MAP also acidifies your soil, so phosphorus and micronutrients are more readily available, especially in calcareous environments. Free of chloride and sodium, this high-purity product quickly dissolves with no residue. It is ideal as a fertigation base but can also be mixed with single or compound fertilizers. Formulated for use in the initial growth stage, it's also ideal for use at the flowering stage or to prevent fruits from being aborted. Purity is what this monoammonium phosphate is all about, so your crops get nothing but the best.

Benefits

- \\ Ideal nitrogen and high-phosphorus boost in the initial growth stage
- \\ Helps plants absorb phosphorus quickly
- \\ High purity: no contaminants, no residue
- \\ Quick dissolving; freely soluble
- \\ Provides acidifying effect on soil to improve nutrient uptake
- \\ Ideal for use in initial growth phase, or immediately before and after seeding, planting or transplanting

How to use

- 1 Nova MAP can be used in fertigation of most crops, in all growing stages. It's especially useful in the early stages of plant growth to promote optimal root development as well at the flowering and fruit formation stages.
- 2 Do not mix the product with calcium-containing products such as Nova Calcium.
- 3 Attention: Mixing the product with magnesium-based products such as Nova Mag-S, Nova MagPhos and Nova Quick-Mg needs extra caution. Their compatibility depends on pH and water quality, so we recommend a small-scale trial before mixing them in large quantities.
- 4 If you need more information, please contact your technical support.

Application rates

Recommended dilution rate for stock solutions: 8-10 kg / 100 L water

Trial first on a small scale before changing the rate, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention

Contact your ICL advisor for more detailed advice. Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.
