

Hi-Mag

Supplying trace elements in a micro granule

Description

A magnesium and trace element analysis to add into your fertilizer program where deficiencies might be present. Ideal for high sand constructions. The microgranules spread well at a low application rate supporting healthy turf growth and development.

Benefits

- \\ All essential trace elements, plus plenty of magnesium for healthy, great-colored turf
- \\ Easy-disperse fine granules
- \\ Useful in areas with high sand content

How to use

- 1 Apply to dry foliage and irrigate after 1 – 2 days if there is no rainfall.
- 2 Irrigation helps with dispersion and lowers risk of mower pick-up on close cut surfaces. Watering-in after application will minimize footprint trails.
- 3 Avoid applying during frosty or drought conditions. If spilled on pavement, concrete, clothes, etc. wash off immediately as it can stain
- 4 Contains iron: do not apply in case of risk of contact with concrete, marble, stone, fabric, swimming pools
- 5 Delay any vertical cutting and/or grooming until 3 days after application, to allow the granules to properly disperse.
- 6 The treatment can be applied every six weeks.
- 7 If you need more information, please contact your technical support

Application rates

Recommended Rate: 7.00 – 11.00 g/m²

Trial first on a small scale before changing the rate, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
