Description

When it's potassium and nothing but potassium you need, Nutri Liquid K10 is right on the money. Nutri Liquid K10 is an efficient and cost-effective way to deliver 10% potassium oxide to your crops. This liquid fertilizer is aligned precisely to the agronomic requirements of your crops. And if your plants are that much more potassium-hungry, why not use Nutri Liquid K23 instead?

Benefits

- \\ A moderate 10% dose of potassium to improve root growth and drought resistance
- \\ Reduces water loss and wilting
- \\ Accurate, safe, and homogeneous dosing – no need to dissolve first

How to use

- 1 These formulations are designed for use in fertigation, particularly drip irrigation, and you can use them on all crops at any stage of their growth cycle.
- 2 Determine the dosage according to the specific characteristics of each crop and the conditions they are grown in, for example the type of soil or substrate, the quality of irrigation water, and the phenological stage of the crop or cultivar. We therefore recommend that you consult your technical advisor to ensure the correct calculation and adjustment of the dosage.
- 3 Since circumstances and application may differ, ICL cannot be held responsible for any negative results. Perform a small trial for the first time and before any new applications, dose changes, or other changes in your cultural practices.
- 4 For more information or recommendations, contact your nearest ICL distributor or representative for your area.

Recommended period of use

JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NNOV	DEC

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
