

NPKS Low Chloride

Crop nutrition without the chloride

Description

ICL's NPK Low Chloride range of high-quality fertilizers is specially designed for chloride-sensitive crops. Each formulation supplies the three primary macronutrients that plants need: nitrogen, phosphorus, and potassium. In addition, these fertilizers include other essential nutrients, including sulfur, magnesium, and calcium. This combination of nutrients provides balanced, low chloride nutrition for healthy crop growth.

Benefits

- \\ Source of nitrogen, phosphorus, potassium, and sulfur for all crops and soils
- \\ Tailor-made formulae with additional magnesium and micronutrients
- \\ Low Chloride formula suitable for chloride-sensitive crops
- \\ Easy and uniform distribution in the field with all modern mechanical spreaders
- \\ Good hardness during handling, bulk blending, and field application
- \\ Delivers superior yields, improved quality, and increased profitability

How to use

- 1 For direct application in fields, orchards and plantations or for bulk-blending with other fertilizers.
- 2 If you need more information, please contact your technical support.

Application rates

Trial first on a small scale before changing the rate, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
