

PK Balanced

Bring some balance to soils low in P and K

Description

ICL's Granular Complex PK Balanced fertilizers are premium fertilizers providing balanced phosphorus and potassium nutrition. Available in various formulations containing essential sulfur, magnesium, and calcium, these fertilizers provide the balanced nutrition required for healthy crop growth. Granular Complex PK fertilizers separate the application of phosphorus and potassium from the nitrogen application. This gives the flexibility to select the correct nitrogen source and dose for the crop and growing conditions to prevent nitrogen overdosing and unnecessary nitrogen leaching.

Benefits

- \\ PK fertilizers with balanced phosphorus and potassium for efficient and steady crop nutrition
- \\ Ideal for phosphorus and potassium deficient soils
- \\ Tailor-made formulae available with added magnesium, sulfur, and micronutrients
- \\ Easy and uniform distribution in the field with all modern mechanical spreaders
- \\ Good hardness ensures consistent handling, bulk blending, and field application
- \\ Deliver superior yields, improved quality, and increased profitability

How to use

- 1 For direct application in fields, orchards and plantations or for bulk-blending with other fertilizers. Compatible with urea and ammonium nitrate in blends.

Application rates

Trial first on a small scale before changing the rate, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
