

ICL NovaPhos®

Novaphos

The best source of phosphorous for acidic soils

Description

ICL Novaphos is a partially acidulated phosphate and wonderful source of phosphorus for acidic soils, with added calcium, magnesium, and micronutrients. With a longer release of phosphorus with residual value partly due to acidulation, you get less leaching and P fixation, making this a more efficient method of fertilizing with phosphorus. And since it serves as an effective calcium source, the product improves cell firmness in your plants' tissue.

Benefits

- Effective source of phosphorus and calcium for acidic soils
- More efficient fertilization thanks to longer release
- Available in various levels of acidulation and phosphorus content

How to use

- 1 Apply directly to acidic soils with low pH, and/or tropical and subtropical soils.
- 2 For perennial crops, such as pastures, use as a maintenance P fertilizer and add sources of S and Ca.
- 3 If you need more information, please contact your technical support.

Application rates

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.
