Characteristics

Description

This blend of trace elements is a class act: it contains all the major elements you could think of. Conditions or bad weather can often mean nutrient loss but not in this case – all the cationic elements come in chelated form, making them up to 5 times more readily available to your plants. A carefully formulated balance of essential trace elements will defend against deficiencies and boost root development and healthy growth. Micromax® WS TE also contains X3, a biostimulant that improves nutrient absorption and uptake. Plus, it's 100% water-soluble, for quick and simple preparation.

Benefits

- \\ X3 biostimulant for optimized uptake through leaves and roots
- \\ Improves the growth of fine roots
- \\ Increases plant vitality
- \\ Fully water soluble
- \\ Can be mixed with fertilizers and most plant protection products

How to use

- 1 MicroMax® WS TE is a premium product which can be easily and safely used in horticulture crops.
- 2 Although main application method is fertigation, it can also be applied by foliar spray.
- 3 Store the product in a cool, dry, ventilated place.
- 4 If you need more information, please contact your technical support.
