## Description

Help your seeds along by putting some Preseeder down before you sow them – also great before laying new turf. Its formulation includes nitrogen, potassium and plenty of phosphorus to help seeds establish themselves. It also contains magnesium for great color, and to hide any signs of stress. Lasts for up to 6 weeks. These micro-granules are easy to spread evenly at low rates, and they break down quickly, so you'll see a speedy response. Perfect for your sports or amenity turf: use Preseeder between spring and autumn.

## Benefits

- Perfect to spread before overseeding or laying turf
- Boosts establishment and color
- Easy-to-use, effective micro-granules

## Application rates

Recommended Rate:

25-40g/m<sup>2</sup>

Trial first on a small scale before changing the rate, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

## How to use

- 1 Apply to dry foliage.
- 2 Irrigation helps with dispersion and lowers risk of mower pick-up on close cut surfaces

- 3 Delay any vertical cutting and/or grooming until 3 days after application, to allow the granules to properly disperse.
- 4 If you need more information, please contact your technical support.
