

ProSelect®

Ryder

100% Festuca rubra rubra

Description

Good quality, low maintenance turf Whether it's in shade or sun, as its name suggests, ProSelect® Ryder's great for golf course as a blend component. It's also the perfect choice on inclines, roadsides, recreation grounds and for reclamation. This fabulous low-maintenance turf has a good dark green color and is ideal if your soil's pH is 4.5 – 8.0. It grows compactly and is featured in our drought, shade, and low maintenance programs.

Benefits

- \\ Good quality low maintenance turf
- \\ Deep green color
- \\ Performs well both in sun and shade

How to use

For best results, seed at 20 – 30 gr/m² in spring or late summer. It's best to keep the seedbed moist throughout germination and establishment. Germination should begin within 7 – 14 days with a minimum soil temperature of 16°. Full coverage in 6 – 8 weeks. Mow when it's reached a height of 6 cm. Looks especially good when fertilized annually with nitrogen at 10 – 15 gr/m². Water deeply and infrequently in absence of rainfall. We recommend a cutting height of 1.5 – 6 cm, or leave unmowed; mow at 6 – 8 cm in shade. If you need more information, please contact your technical support

Application rates

Average sowing rate

30 g/m²

Try first on a small scale before changing the rate, or any other variables. As circumstances can differ and the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
