

H2Pro®

SaltSmart

Specialist penetrant sodium remover for use in links, coastal, and other areas.

Description

H2Pro SaltSmart is designed to move water and exchange cations thus reducing impact of salt on turf. The product allows water to penetrate, dissolve salts and flush salts below the rooting level or out into the drainage system. Salt levels can build up in a sports turf rootzone for a number of reasons: Sea spray (links courses, irrigation with reclaimed water, poor quality groundwater for irrigation, high/low rainfall. Also low CEC sand-based rootzones that have limited buffering against salt influx.

Benefits

- \\ Improves conditions in high salt situations
- \\ Flushes salts from the rootzone
- \\ Helps water move through soil

How to use

- 1 Application timings: monthly.
- 2 If you need more information, please contact your technical support.

Application rates

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
