Description

Take complete control of your late spring potting with Osmocote® 5's controlled-release technology. This 5th generation programmed release fertilizer technology provides your plants with sustained, safe, and efficient nutrition over a 5-6 month longevity period. Achieve the best possible plant color, health, and growth by optimizing the availability and uptake of trace elements with the OTEA-system.

Benefits

- \\ Better, more precise nutrient uptake with NutriMatch-Release technology
- \\ Best nutrient release efficiency
- \\ Ultra-consistent, every bag identical

How to use

- 1 Use Osmocote 5 for container nursery stock, perennials, and various pot plant types.
- 2 Mix the product into the growing medium for optimum granule distribution.
- 3 You can apply Osmocote 5 using dibbling methods. (Note: The 3-4M longevity is not recommended for plant hole dibbling, only for mixing).
- 4 Contact ICL if you want to add additional trace element mixes on top of a full rate Osmocote 5.
- 5 You can combine Osmocote 5 with Peters and Universol water-soluble fertilizers in your fertilizer plan.
- 6 The longevity of Osmocote 5 is determined at 21°C. At lower average soil temperatures, the product will work longer at higher average soil temperatures shorter. Indicational: 16°C: 5-7M, 21°C: 5-6M, 26°C: 4-5M.
- 7 Partly used bags must be closed/sealed properly.
- 8 Store under dry and cool conditions.

Application rates

	Average nutritional need	High nutritional need	Minimum recommended base rate (in case additional water soluble fertilizers are applied)
Container nursery stock and perennial crops (covered cultures)	2-2.5 g/l	3-4 g/l	2 g/l
Container nursery stock and perennial crops (uncovered cultures)	3-3.5 g/l	4-5 g/l	2-3 g/l
Pot plants	3-4 g/l	4-5.5 g/l	2-3 g/l
Bedding/balcony plants	3-4 g/l	4-5.5 g/l	2-3 g/l

Important: Maximum recommended starter fertilizer dosage in the growing medium is 0.5 kg/m³. Rates for Osmocote® 5 are based on pot volumes. In case of repotting into bigger pots, dilution effect should be compensated by increasing dosage rate in fresh growing medium. The recommended rates above are based on unfertilized substrates. These are general recommendations. Adjust for specific situations, such as use in tunnels or greenhouses, or specific climate conditions. This product is not recommended for dibbling and/or autumn/winter potting. Contact us for more detailed advice.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
